(b) Hyperoxia 300 s convergence ($n = 60$ reruns)
6 S1 runaway points off-scale
(plateau 770-1408 mmHg; numerical runaway)
S1 ($n = 44$)
S3 ($n = 8$)
S4 ($n = 8$)
$y = x$ (no change)
600 mmHg classifier bound
≈ 663 mmHg alveolar gas equation
PaO$_2$, plateau over t = 240–300 s, 300-s rerun (mmHg)
PaO$_2$, mean over t = 60–120 s, original run (mmHg)
